Professional Summary

Junior Full-Stack Web Developer with about a year and a half of experience so far, across a commercial role, some freelance work and a handful of academic projects. Comfortable with PHP, CakePHP, JavaScript, React.js, Node.js and MySQL, and most of the day-to-day work touches REST APIs, authentication systems and databases. Enjoys taking a messy manual process apart and figuring out how to make it actually work properly.

Technical Skills

- **Programming:** PHP, JavaScript (ES6+), TypeScript (Basic), Python, SQL
- **Frontend:** HTML5, CSS3, Bootstrap, Tailwind CSS, React.js, jQuery, AJAX
- **Backend:** Node.js, Express.js, Laravel (Basic), and picks up new PHP frameworks quickly when a project calls for it
- **Databases:** MySQL, PostgreSQL, MongoDB
- **APIs:** REST APIs, JSON, Postman, Swagger
- **Version Control:** Git, GitHub
- **Development Tools:** VS Code, Composer, XAMPP
- **Cloud & DevOps:** AWS (Basic), Azure (Basic), GitHub Actions
- **Design & CMS:** Figma, Canva, Photoshop, WordPress
- **Development Concepts:** Responsive Web Design, Pixel-Perfect Development, Cross-Browser Compatibility, Semantic HTML, W3C Standards, CSS Animations, Authentication & Authorization, Production Support, Debugging

Professional Experience

OzCar Pty Ltd | Full-Stack Web Developer

July 2025 - July 2026

Sydney, NSW · Full-time

Key Achievements

- Built and maintained the front-end and back-end of a commercial vehicle valuation system using PHP, CakePHP, JavaScript, AJAX and MySQL.
- The valuation calculations were automated too, factoring in vehicle age, kilometres travelled and trade percentages against the rules the sales team already worked to.
- Replaced the old SMS verification with OTP and QR code login through Google and Microsoft Authenticator.
- Turned design mock-ups into responsive interfaces with HTML, CSS, JavaScript, AJAX and Bootstrap, then tested them across browsers and wired them up to the backend.
- Built admin tools for bulk processing and exporting hundreds of records at once, which cut manual effort by roughly 30-40%.
- Automated parts of the inventory workflow with scheduled jobs and business logic, saving the team several hours of repetitive manual work each week.
- Added AJAX-based progress tracking and export options so the admin tools were less of a pain to use.
- Worked directly with business stakeholders to gather requirements, build new features and improve

what was already there.

- Handled production support too, tracking down issues, debugging and keeping the application running day to day.
- Tested across browsers and devices and fixed UI inconsistencies as they came up.
- Built pages with semantic, accessible HTML and CSS, following W3C standards and responsive design practices.

Freelance Web Developer (Part-time / Weekend Projects)

Ongoing

- Built responsive sites for friends, neighbours and a few small businesses using HTML, CSS, JavaScript, PHP and WordPress.
- Talked directly with clients to work out what they actually needed, then built it.
- Kept existing sites running too - content updates, small fixes and the occasional emergency.

Education

- **Diploma of Information Technology** (Front-End & Back-End Web Development)
- **Certificate IV in Information Technology** (Web Development)
- **Certificate III in Information Technology**
- **Bachelor of Engineering**

Projects

Trade Parameters & Vehicle Valuation System (Commercial)

PHP | CakePHP | JavaScript | AJAX | MySQL

- Built front-end and back-end modules for a commercial vehicle valuation system.
- Configured valuation rules and business logic.
- Built manufacturer and model management functionality.
- Collaborated with stakeholders to improve business workflows.

Multi-Factor Authentication & QR Login (Commercial)

PHP | CakePHP | JavaScript

- Set up QR code registration and TOTP-based authentication.
- Integrated Google and Microsoft Authenticator.
- Improved application security by replacing SMS authentication.

Library Management System (Academic)

PHP | MySQL | Bootstrap

- Created a web-based library system with authentication and book management.
- Added CRUD functionality and database integration.

Interests

- Badminton
- Web Designs and learning new technologies
